

Sales arguments 2Power

Arguments for distributors and resellers:

You receive a unique, patented product with which you can differentiate yourself from your competitors.

As the product is unique it is not comparable → less price pressure

With 2Power you make your product portfolio attractive to new and more customers.

With MS5 2Power you are advertising a world novelty.

You receive a complete system including all components from one hand.

Arguments for end clients, investors, roof owners:

You receive electric and thermal energy from one module.

With 2Power you can use the whole roof area for electric energy production while still having heat for the warm water system and heating system support.

Due to the cooling effect 2Power modules produce 10 – 20% on the annual output more electric energy than other modules with the same kWp/m² specification.

This increases the financial return significantly.

You produce warm water very efficient and cheaply.

Dächer, die's drauf haben

NELSKAMP

Arguments for end clients, investors, roof owners:

The 2Power solar system has a defrosting function allowing the surface to be cleaned off snow and ice without climbing on the roof. This allows the system to have more working hours per year than other systems.

You receive a homogeneous roof appearance for using only one module type for the collection of the two energy types – electric and thermal energy.

You receive a solar plant that is fully tested and certified by TÜV Rheinland.

You receive a large portion of independence from gas and electricity prices and their future developments.

You receive a project specific solution from one hand including a system guarantee.
